

Portfolio Website — Project Documentation

Week 2 Submission · The Developers Arena

1. Project Overview

This project is a personal portfolio website built using HTML5 and CSS3, designed to showcase my academic background, technical skills, and contact information as a Computer Science Engineering student.

Goal: Practice building a complete, semantic, and responsive webpage covering navigation, layout sections, image embedding, and a working contact form.

Project Name	SM_A Portfolio Website
Author	Arathi Shekhar Munavalli
Repository	github.com/arathism/Portfolio-Website_week2
Submission	Week 2 — The Developers Arena

2. Setup Instructions

1. Clone the repository: `git clone https://github.com/arathism/Portfolio-Website_week2`
2. Navigate into the project folder: `cd Portfolio-Website_week2`
3. Open `index.html` directly in a browser, or run it using the Live Server extension in VS Code.
4. No build tools or dependencies are required — this is a static HTML/CSS project.

3. Code Structure

The project follows a clean, organized file hierarchy:

- `index.html` — Main page containing About, Skills, and Contact sections
- `style.css` — All styling: layout, colors, gradients, responsiveness
- `README.md` — Project documentation and usage guide
- `images/` — Profile photo and other visual assets
- `screenshots/` — Screenshots demonstrating the working site

4. Technical Details

CSS Concepts Used

- Flexbox — used for the navigation bar and skills section layout
- CSS Grid & Media Queries — used to make the layout responsive across screen sizes

- Linear gradient background — applied to the header banner (blue to purple)
- Box-shadow and border-radius — used to create card-style sections for About, Skills, and Contact
- Hover effects — applied to navigation links and the Send Message button

Design Decisions

- A blue-to-purple gradient header was chosen for a clean, modern, professional first impression
- Content is organized into clearly separated card-style sections to improve readability
- A circular profile image with a colored border accent draws attention to the About Me section
- A warm accent color (red/orange) was used for the Send Message button to stand out as a clear call-to-action

Architecture

The page uses a single-page layout with anchor-based navigation (About, Skills, Contact) in the top navbar. Each section is a self-contained block, making the structure easy to extend with new sections in future weeks.

5. Responsiveness Approach

- Used relative units (% , rem) instead of fixed pixels wherever possible
- Verified the layout at multiple browser window widths
- Skill boxes and form fields resize and stack correctly on smaller screens
- Tested scrolling behavior and section spacing on both desktop and reduced window sizes

6. Testing Evidence

- Verified all navbar links (About, Skills, Contact) scroll smoothly to their correct sections
- Tested the contact form's Name, Email, and Message fields for expected input behavior
- Checked the layout and styling in both Chrome and Edge browsers
- Confirmed the page renders correctly at different window widths (see screenshots below)

7. Visual Documentation

Screenshots of the live site, demonstrating the header, About Me, Skills, and Contact Me sections:

Screenshot 1	Top section — Header, navigation bar, About Me with profile photo, and Skills section
Screenshot 2	Lower section — Skills grid, Contact form, and footer
